

PAL40H40 Aluminum profile

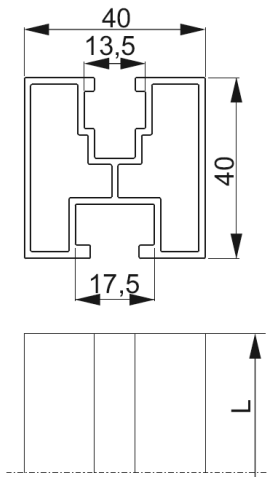

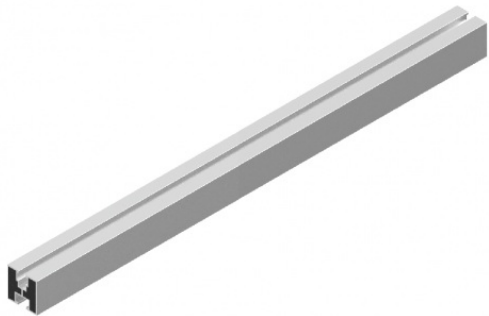

0.0 Sheet thickness 0.0 mm

Information

Usage
Supporting panels in structures for sloping roofs and flat roofs, mounting panels to the supporting structure

Material
Aluminium (EN AW-6063)
Available finishes:
L- powder coating RAL9005 (up to 6 m length)

Additional information
Advantages:
- stable panel support in structures for sloping roofs and flat roofs
- the width of the sockets in the profile prevents screws and hexagonal nuts from turning (M8 for the upper socket and M10 for the lower socket)
- special profile cross-section to increase its strength
